LUXURY BY DESIGN

What's hot at designEX? *Compiled by Belinda Crestani*

Launching at designEX was the original, versatile and eco-friendly Blu Box Fireplaces from **The Fire Company**. Blu Box Fireplaces are chimney-free, easy to install and simple to operate. Denatured ethanol (or methylated spirits) is an eco-friendly, clean-burning renewable liquid fuel which means there's no need for a chimney or complex gas or electricity connection. Simply fill the burner with the fuel and ignite. And at the end of the night, just flip the lid closed with the provided rod to extinguish the flame. The 2.5-litre Blu Box Burner heats a space of more than 20 square metres for more than six hours. www.bluboxfireplaces.com.au

Miele introduces the MasterCool series. A flexible, modular column system means the integrated fridge, fridge-freezer, freezer and wine conditioning units can be installed in a way that allows many different configure combinations, while at the same time maximising storage space. www.miele.com.au

Hettich makes living spaces work better with the development of glass DesignSide panels on its Innotech drawer systems. www.hettich.com.au
