

Lift Shop June Newsletter

[Follow Us](#)

This year Lift Shop has once again been involved with some remarkable projects, and we're very proud of the installations that have been completed... with many more still in progress.

Our lifts continue to be in high demand - for both their features and style. We increasingly find that the technology and safety features are a big draw card, but of course, customers also love the customisation possibilities, which are endless. Then there's the quality, which is unbeatable - there's just nothing else quite like it, so don't be fooled.

It continues to give us great pleasure to share some of our most recently celebrated projects with you and this month we feature:

Arcade Attraction

Already a stunning shopping arcade in the Northern Tablelands town of Armidale, the only thing missing was lift access to the upper level. With a distinct style of rich timbers, pattern tiled flooring and decorative wrought iron features - not just any lift was going to be suitable.

When the architectural design team explored Lift Shop's product range with our consultants, they were delighted with the possibilities offered by our FreedomLift model.

The Wow Factor

With a focus on modern seamless lines, the inclusion of the ElfoLift and frameless glass shaft provides a stunning WOW FACTOR to this new home in Sydney's Cremorne.

Serving two levels, this opposite through car has one glass wall to make the most of the glass shaft and an emphasis on polished stainless steel both inside and outside the cabin (our ElfoLift can be fitted with stainless steel external profiles to enhance the outside appearance of the lift car).

Something For The Whole Family

For this new 3 level bayside home in Queensland's Cleveland, our clients wanted only the best and could appreciate the quality being provided by our machine room less traction driven Supermec.

To best suit the floorplan, an opposite through car design was selected. The cabin was fitted out with a combination of popular Similinox skinplate, full height mirror, custom flooring to match the house, labarint stainless steel ceiling with light diffuser and polished stainless steel doors with tinted glass.

P2 Helps You

The P2 Platform manufactured in Italy is convenient when requiring a machine to lift a wheelchair two vertical metres.

It looks good with its anodised aluminium and glass cabin perched on top of a scissor hoist which is hydraulically driven. This machine is popular due to its ability to simply be placed on the ground and not require a self supporting structure around it.
